

COA of Adenovirus, type 5

Product Code:B0017

Lot No.:20231110

Source: HEK293 cells, inoculated with Adenovirus, type 5

Purification: Virus was grown on monolayer of HEK293 cells. When the cultures showed pronounced virus containing medium was purified from cell fragments Virus was pelleted by high speed centrifugation at 18000 rpm for 2.5 hours in the SW27 rotor for 20 min at 4 °C, then the supernatant was collected and protein concentration was determined by Lowry method.

Presentation: STE, 0.1 % sodium azide (Preservatives I) .

Inactivation: Formaldehyde treatment

Immunological activity: Tested with anti-adenovirus antibodies in ELISA.

Storage: 2-8°C for frequent usage, -20±10°C for 4 years. Avoid repeated freeze-thaw cycles.

Material safety note: This product is sold for research use only. Standard Laboratory Practices should be followed when handling this material. Product contains formaldehyde and sodium azide as a preservative. Although the amounts are very small appropriate care must be taken when handling this product.

Precaution:The products and pre-frozen biological ice packs are packaged in an EPS transportation box and delivered by regular express, and they must arrive within 72 hours.
